COURSE DESCRIPTION

This course will provide training of both radar and laser speed measurement devices and prepare the student instructor to present the "Speed Measurement Course" for certification of attendees.

The student instructor will learn the different scientific principles behind these devices and their proper application within the overall speed enforcement program. In addition, the course will cover the various aspects of equipment use such as testing and verification protocols, case law, health issues, and many other operational considerations.

Through practical exercises using a variety of different units, you will be exposed to the latest technology in the field. You will also take part in teaching exercises that emphasize the need for complete equipment familiarity on the part of the operator.

Course topics include:

Time, distance, and speed measurement

Scientific principles of radar and laser

Operational considerations

Case law and administrative rules

Preparations for court presentation

Theories of adult teaching and learning

Classroom presentations
