

World GDP and Per Capita GDP

- In 2007, the world's total output (real GDP) was roughly \$65 trillion. What percent of this total was produced by the three largest economies? (round to two decimal places)

Answer _____%

- What percentage of America's GDP per capita is available to the average citizen of South Korea?

Answer _____%

- What percentage of America's GDP per capita is available to the average citizen of Russia?

Answer _____% citizen of India?

- What percentage of America's GDP per capita is available to the average

Answer _____

Answers:

1. Add together the top 3 economies and divide by the world total GDP:
 $(13.8 + 7.1 + 4.4)/65 = 38.92\%$
2. Take the Per Capita GDP of South Korea and divide by the Per
Capita GDP of the US: $\$24,750/\$45,850 = 53.98\%$
3. Same method as #2: $\$14,400/\$45,850 = 32.11\%$
4. Same method as #2: $\$2,740/\$45,850 = 5.98\%$
